

Creating better environmental outcomes for the Real Estate and Construction sectors

Thomson environmental consultants is one of the UK's environmental consultancies offering expert support across all sectors and environments. We've built a reputation for going the extra mile. Finding innovative and creative solutions for clients that enable them to achieve their business goals while surpassing their environmental expectations.

We have worked with a wide range of developers and contractors across the UK on projects of every conceivable scale. As a result, we have a clear understanding of commercial imperatives, however we are equally passionate about protecting our environment and enhancing local ecosystems. In the words of our CEO:

We don't just help our clients comply with the legislation. We help them work towards the best outcome possible to benefit both them and the natural world.

To talk to us about how we can help you achieve your commercial goals and improve your ecological and environmental impacts, get in touch.

SUPPORTING YOUR PROJECTS

Site Selection

Working with us at the earliest stages of a project enables you to optimise your site selection and effectively manage environmental risk. Thorough assessments and surveying at this stage will avoid potential delays further down the line, reduces the risk of unforeseen costs and identifies opportunities for environmental gain.

Our award-winning geospatial team can provide state of the art GIS Mapping, and we have a wide range of specialists to carry out Environmental Impact Assessments (EIAs) and provide Ecology Surveys.

Planning and Design

Our team are highly experienced at working with planners, architects and developers. Their expertise and knowledge is invaluable in developing risk mitigation strategies and helping to plan projects that minimise ecological and environmental impacts and maximise positive outcomes.

As well as delivering all ecological work required for planning applications, including EIAs, we can also undertake ecology BREEAM reporting, advise on and devise Biodiversity Net Gain (BNG) strategies and provide Habitats Regulations Assessments. We can also assist you to report on your environmental and sustainability performance.

Mitigation Implementation, Habitat Creation and Tree planting

Once projects are underway, we can provide ecological contracting services, including habitat creation, support for surveys and mitigation, and invasive species management. We can also offer ongoing ecological support services once projects have been signed off and become operational.
